

# BARLEY GRAIN

## DESCRIPTION:

Barley has about 95 percent of the energy of corn and is higher in fiber. Barley should be ground or rolled for maximum utilization by dairy cows.

Barley can vary greatly in feed value depending on its source and growing conditions. Protein may vary from 7 to 13 percent. Lightweight or immature barley tends to be higher in fiber, less digestible and lower in energy than heavy weight barley.

Barley is very palatable and safe to feed in large quantities. It may be included in the grain mix at high levels.

## \*TYPICAL ANALYSIS:

<b>Dry Matter</b>	89%
<b>Crude Protein</b>	11.6%
<b>Fat</b>	02.0%
<b>Crude Fiber</b>	06.0%
<b>Neutral Detergent Fiber</b>	16.9%
<b>Acid Detergent Fiber</b>	06.2%
<b>Calcium</b>	0.07%
<b>Phosphorus</b>	0.36%
<b>Total Digestible Nutrients</b>	76.0%
<b>Net Energy - Lactation</b>	78.3 Mcal/100 lbs.
