

# DRIED VEGETABLE POMACE

## DESCRIPTION:

**Vegetable Pomace** comes from a food grade plant, which juice extractions of consistent blends of seven vegetables (Carrot, Celery, Beet, Parsley, Lettuce, Watercress and Spinach) to make a consistent base for one of their food products. **Vegetable Pomace** is the dried mixture of the peels and pulp from these healthy and flavorful vegetables. This material is highly digestible and very consistent.

As only fresh vegetables are processed, all material becomes available in mid to late summer. After drying by LaBudde Group, the product is bagged and stored for consistent year-round availability. No preservatives are needed to maintain the quality of the **Vegetable Pomace** in well managed storage facilities.

This is a tremendous opportunity to receive the benefits of several vegetables in one product. This is a special and unique product that would be a healthy addition in pet food and pet treat formulas.

Please call for samples and availability. Although only limited amounts are available each year, we feel you will find the cost surprisingly attractive in comparison to other dehydrated vegetable pricing. For more information please visit the LaBudde vegetable pomace web page –
